

Introduction to Reservoirs:
Where Germs Live

Session 1

Body Reservoirs

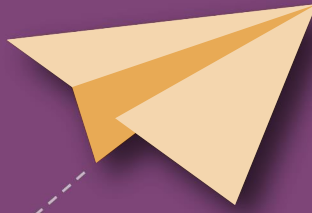

1

Welcome

Agenda

- Welcome and Introductions
- Four Body Reservoirs
- Four Healthcare Environment Reservoirs
- Body and Healthcare Environment Reservoirs: Synthesis

Introduction to Reservoirs: Where Germs Live | Session 1: Body Reservoirs

2

Four Body Reservoirs

Introduction to Reservoirs: Where Germs Live | Session 1: Body Reservoirs 3

3

What Do You Think?

Introduction to Reservoirs: Where Germs Live | Session 1: Body Reservoirs 4

4

The Body Reservoirs

5

Word Clouds and Discussion

6

Skin Word Cloud

PROJECT FIRSTLINE
CDC's National Training Collaboration
For Healthcare Infection Prevention & Control

Introduction to Reservoirs: Where Germs Live | Session 1: Body Reservoirs 8

8

Key Takeaways about the Skin Reservoir

- ✓ Skin, especially hands, interacts with the environment daily.
- ✓ Pathways:
 - Touch
 - Breaking down or bypassing the body's defenses

PROJECT FIRSTLINE
CDC's National Training Collaboration
For Healthcare Infection Prevention & Control

Introduction to Reservoirs: Where Germs Live | Session 1: Body Reservoirs 9

Centers for Disease Control and Prevention
Epidemiology and Prevention

Introduction to Reservoirs: Where Germs Live | Session 1: Body Reservoirs 10

10

Key Takeaways about the GI System Reservoir

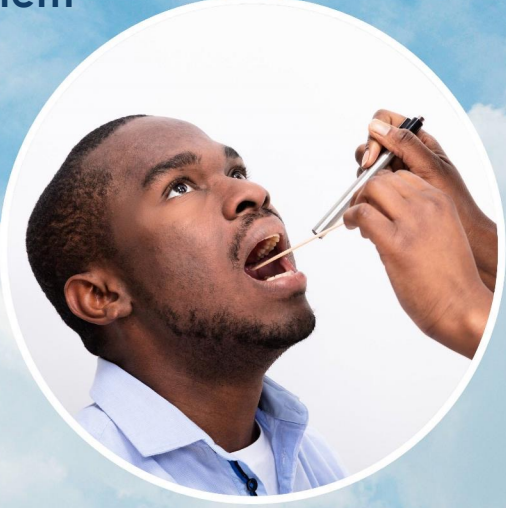

- ✓ The "gut" usually refers to most of the intestines, rectum, and anus.
- ✓ Gut germs travel easily in stool.
- ✓ Pathways:
 - Touch
 - Breaking down or bypassing the body's defenses

**PROJECT
FIRSTLINE**
Centers for Disease Control and Prevention
Epidemiology and Prevention

Introduction to Reservoirs: Where Germs Live | Session 1: Body Reservoirs 11

11

Respiratory System Word Cloud

PROJECT FIRSTLINE
U.S. National Training Collaboration
 For Healthcare Infection Prevention & Control

Introduction to Reservoirs: Where Germs Live | Session 1: Body Reservoirs 12

12

Key Takeaways about the Respiratory System Reservoir

- ✓ Upper airway: Nose, mouth, throat, windpipe
- ✓ Lower airway: Lungs
- ✓ Pathways:
 - Breathing in
 - Splashes and sprays
 - Touch

PROJECT FIRSTLINE
U.S. National Training Collaboration
 For Healthcare Infection Prevention & Control

Introduction to Reservoirs: Where Germs Live | Session 1: Body Reservoirs 13

13

**Blood
Word Cloud**

PROJECT FIRSTLINE
Centers for Disease Control and Prevention
 National Healthcare Safety Network

Introduction to Reservoirs: Where Germs Live | Session 1: Body Reservoirs 14

14

Key Takeaways about the Blood Reservoir

- ✓ Blood is not supposed to have germs in it.
- ✓ Some viruses cause infections that release virus into the blood. If a person is infected and untreated, blood can then spread the virus to other people.
- ✓ Pathways:
 - Breaking down or bypassing the body's defenses
 - Splashes and sprays
 - Touch

PROJECT FIRSTLINE
Centers for Disease Control and Prevention
 National Healthcare Safety Network

Introduction to Reservoirs: Where Germs Live | Session 1: Body Reservoirs 15

15

Bringing It Together

16

Key Takeaways

- ✓ "Reservoirs" are the places on and in our bodies and in the environment where germs live. Germs frequently spread between and among these reservoirs.
- ✓ Four reservoirs in the human body that are important for infection control are the skin; the gastrointestinal (GI) system or "gut"; the respiratory system; and blood.
- ✓ Understanding where germs live helps us recognize where there is risk for them to be spread, and why infection control actions work to stop them from spreading and making people sick.

22

Four Healthcare Environment Reservoirs

24

Reservoirs in the Healthcare Environment

Water and Wet Surfaces

- Sinks and faucets
- Drains
- Ice machines
- Therapy pools

Dry Surfaces

- Bed rails
- Door handles
- Countertops
- Bed curtains

Dirt and Dust

- Construction
- Maintenance
- Repair
- Renovation

Devices

- Stethoscope
- Blood pressure cuff
- Endoscope
- Artificial hip

25

Discussion

26

Question

Water and Wet Surfaces

Dry Surfaces

Dirt and Dust

Devices

27

Water and Wet Surfaces Reservoir

- Water is used in many ways in healthcare.
- Tap water is safe to drink, but it is not sterile.
- Water and wet surfaces can be good places for germs to grow.

Pathways:

- Touch
- Splashes and sprays
- Breathing in

28

Water and Wet Surfaces: Taking Action

29

Dry Surfaces Reservoir

- Germs found on the body, in the air, and in stool can also be found on dry surfaces
- Includes “high-touch” surfaces: bed rails, door handles, light switches

Pathways:

- Touch
- Breaking down or bypassing the body's defenses

30

Dry Surfaces: Taking Action

31

Dirt and Dust Reservoir

- Dirt, soil, and dust from both outdoors and indoors have germs in them that can be carried through the air.
- Germs in dirt and dust can harm certain patients.

Pathways:

- Breathing in
- Touch

32

Dirt and Dust: Taking Action

33

Devices Reservoir

- Often in contact with multiple surfaces and people
- Used **on** a patient's body (stethoscope, blood pressure cuff)
- Used **in** a patient's body (IV needle, endoscope, artificial hip)

Pathways:

- Breaking down or bypassing the body's defenses
- Touch

34

Devices: Taking Action

35

Bringing It Together

Introduction to Reservoirs: Where Germs Live | Session 2: Healthcare Environment Reservoirs

36

36

Key Takeaways

- ✓ "Reservoirs" are the places on and in our bodies and in the environment where germs live. Germs frequently spread between and among these reservoirs.
- ✓ Four reservoirs in the healthcare environment that are important for infection control are water and wet surfaces; dry surfaces; dirt and dust; and devices.
- ✓ Understanding where germs live helps us recognize where there is risk for them to be spread and why infection control actions work to stop them from spreading and making people sick.

Reservoirs Review

Body

Skin

GI system or "gut"

Respiratory system

Blood

Environment

Water and wet surfaces

Dry surfaces

Dirt and dust

Devices

What Do You Know?

How Does It Happen?

- Break out into groups.
- Based on your tables, work together to create a scenario where your assigned reservoirs interact in healthcare.
- Work together to bring one example/scenario back to the group:
 - “In my daily work, I notice [body reservoir] interacting with [environment reservoir] when...”

50

Bringing It Together

52

Key Takeaways

- ✓ The places where germs live are called “reservoirs.” There are reservoirs in the human body and in the healthcare environment.
- ✓ Infection control actions are connected to how germs can be spread to and from these reservoirs to different areas of the body, from one person to another, from people to things, or things to people.
- ✓ Knowing where germs live and how they can be spread can help you understand why infection control actions work to stop them from making people sick.
